This is the most recent offering on Science Notes, with data retrieved from the IUPAC in September 2015. It's perfect for working homework problems. It looks a lot like its earlier version, except this one is cleaner, more accurate, has a smaller file size, and resizes even better.

### Periodic Table Wallpapers - Science Notes and Projects

Because Li metal reacts with the organic solvent of the electrolyte, the decomposition products form solid-electrolyte interphase (SEI) layers, and the higher surface areas of dendritic Li are even more reactive. Insulating SEI layers worsen the uneven distribution of the electrical field within the anode and induce more dendrites to grow.

### How lithium dendrites form in liquid batteries
